INTEGRATED HOME

# Big Love

Audio One Sound & Video gives a night spent at home a whole new meaning.

**“Massive” is the only word to describe this 30,000-square-foot home.** Designed within the beautiful craftsmanship is sophisticated lighting and security systems, multiple audio/video zones and a dedicated home theater, including one in the family’s private bowling alley. Audio One Sound & Video provided seamless integration of the two-lane bowling alley’s sound and lighting that also has 12 speakers and two subwoofers, a high-end front projector and a screen in a mural depicting a drive-in movie theater.

A Crestron control system processor and a network poll accelerator are centrally located and control the complex systems. Crestron touchpanels and waterproof remotes around the pool provide functions such as fountains, water features and lighting. Three satellite TV systems, HD Cable TV and HD off-air system provide non-stop viewing of programs in just about any room in the house.

Serious movie watching takes place in the dedicated theater equipped with a Runco projector and Stewart screen and 7.1 surround sound. A centrally located movie server with five terabytes of movies keep the family “home” most of the time, and is just one example of how technology can tame the biggest of beasts. ■
